CUSTOMER TESTIMONIAL

CUSTOMER TESTS & REPORTS

They Reported:

Our first dyno test showed a 1 to 2% increase in horsepower with the Petron Plus Formula 7 Engine Conditioner.

In the race car we saw a 20 degree drop in oil temperature and a 10 degree drop in water temperature.

We rebuild our engines after 600 to 700 miles of competition and normally would replace bearings, but with the use of Petron Plus Formula 7 Engine Conditioner we have now reused some bearings for three and four rebuilds—and are still using them.

We also use Petron Plus Formula 7 Transmission & Gearbox Supplement in the transmission, and differential. Plus the Petron Plus Formula 7 High-Temperature, Extreme-Pressure, Multi-Purpose Polyurea Grease in the wheel bearings, and U-Joints with great results.

The other day we were putting some new bronze valve guides in some cylinder heads. The guides come to us at about .001 to .002 undersize and have to be reamed and honed to the proper clearance. We use a one horsepower drill motor to drive the reamer and a cutting oil to lube the reamer. We tried and tried to run the reamer through the guide but it just would not go. It would go only part way through and stoop. We backed it out and let it cool off and tried it again. The reamer just would not go through the and the powerful drill seemed as though it was about to break the reamer in half.

We knew it was time to try something else. We got the Petron Plus Formula 7 Industrial Super Lube and sprayed some on the reamer and tried again and it went through each guide on the first try. The reamer did not get hot as it had previously, so we could ream one guide right after another.

Again, thanks to Petron Plus Formula 7 for wonderful products. It not only makes our race car faster and more reliable, it makes our jobs easier around the shop.
